**oblate spheroid**, which means it's essentially a sphere that is
slightly flattened at the poles and bulges a bit at the
```

equator.\n\nThis has been confirmed by:\n\n* **Observations from space:** Satellites and astronauts clearly show a spherical Earth.\n* **Circumnavigation:** It's possible to travel around the world in any direction and return to your starting point.\n* **Ships disappearing over the horizon:** When a ship sails away, its hull disappears first, then its mast, which is consistent with the curvature of the Earth.\n* **Lunar eclipses:** The shadow the Earth casts on the Moon during a lunar eclipse is always round.\n* **Varying star constellations:** Different stars are visible from different latitudes.\n\nThe idea of a flat Earth is a fringe theory that contradicts overwhelming scientific evidence and centuries of observations."
