

API Name: Register User
Method: POST
Endpoint: /api/register

Request

```
{
  "full_name": "Rajvir Singh",
  "email": "raj@example.com",
  "password": "SecurePass123"
}
```

Note: Passwords will be hashed before being stored in the database, such that they are not stored as visible plain text. Passwords are visible here for demonstration purposes.

Response

```
{
  "status": "success",
  "message": "User registered successfully",
  "user_id": 101
}
```

Errors

```
{
  "status": "error",
  "message": "Email already exists"
}
{
  "status": "error",
  "message": "All fields are required"
}
```

The screenshot displays the Postman application interface. On the left, the 'COLLECTIONS' sidebar shows 'My Collection' with two items: 'GET Get data' and 'POST Post data'. The main workspace shows a POST request to 'https://postman-echo.com/post'. The request body is a JSON object:

```
{
  "full_name": "Rajvir Singh",
  "email": "raj@example.com",
  "password": "SecurePass123"
}
```

. The interface includes tabs for 'Docs', 'Params', 'Authorization', 'Headers', 'Body', 'Scripts', 'Tests', and 'Settings'. The 'Body' tab is active, showing the JSON data. On the right, there's a 'Send' button and a 'Cookies' section. At the bottom right, there's a chat window titled 'Designing a New API with...' with a message from '#Onboarding-Agent' and a list of questions to ask the user.

Response:

```
{  
  "status": "success",  
  "message": "User registered successfully",  
  "user_id": 101  
}
```
